LIMITED EDITION **GOLD CHROME DEFLECTING BEAM TORQUE WRENCH**

THE WORLD'S BEST TORQUE WRENCH JUST GOT SOME BLING TO CELEBRATE **95 YEARS** OF WARREN & BROWN PRECISION TOOLS

To celebrate our 95th year anniversary, Warren & Brown has released a limited edition gold chrome torque wrench. Only 250 pieces of the iconic 323500 have been manufactured to recognise this historic achievement.

HOW IT WORKS

The Deflecting Beam Torque Wrench works by applying torque to a deflecting beam rather than a coil spring. Over time, a coil spring loses its compression and can be easily damaged if left under load for long periods of time. The recalibration and repair costs for these types of wrenches can be quite high throughout the life of the wrench.

On the other hand, the Deflecting Beam torque wrench has no wearing parts and the unique design ensures accuracy of +/- 2% throughout the range of the wrench. The all steel construction ensures supreme durability and reliability in the harsh environments it is expected to operate in.

The torque setting can be easily selected via a sliding scale which displays the torque units in ft.lbs, Nm and kg-cm. As force is applied, the beam begins to flex and as soon it reaches the selected torque setting, it engages the signaling mechanism which notifies the user that the setting has been reached. The dual signal feature allows the user to see and hear when the selected torque has been reached.

FEATURES:

- Dual-Signal (see and hear when the wrench has reached the selected torque)
- Rigidity
- Accuracy
- Repeatability
- Durability
- Meets or exceeds Australian standards
- Made in Australia
- All steel construction

P/N	Torque Range (English)	Torque Range (Metric)	Drive
323500L	20-220ft.lbs.	30-300Nm	1/2"
